FEATURES

Everything you need to pass the screen

A complete, rule-based ATS simulation — built for accuracy, transparency, and speed.

Weighted ATS Scoring

A transparent 0-100 score built from 7 weighted categories: skills, keywords, experience, projects, education, formatting, and certifications.

Fuzzy Keyword Matching

RapidFuzz-powered matching catches near-matches and synonyms, not just exact string matches — fewer false negatives than naive keyword scanners.

Actionable Recommendations

Every suggestion includes a title, description, the reasoning behind it, and a priority level — no vague advice.

Deep Resume Parsing

Extracts contact details, skills, experience, education, certifications, projects, languages, and achievements from PDF or DOCX files.

Private & Offline

No third-party AI APIs. Every byte of analysis happens on this server using deterministic, auditable Python logic.

Downloadable PDF Report

Export a polished, recruiter-style PDF report with your score breakdown, keyword analysis, and recommendations.

HOW IT WORKS

From upload to insight in under a minute

STEP 1

**Upload Your Resume**

Drag and drop your resume in PDF or DOCX format. We validate format and size instantly.

STEP 2

**Paste the Job Description**

Paste the target job posting, or try a sample. We extract required skills and keywords.

STEP 3

**Get Your ATS Score**

Our rule-based engine scores your resume across 7 weighted categories in seconds.

STEP 4

**Apply With Confidence**

Follow prioritized, actionable suggestions and download a polished PDF report.

STEP 1 OF 3

Upload Your Resume

We support PDF and DOCX files up to 5 MB.

 **Resume.pdf**

100.4 KB

Paste the Job Description

We'll extract required skills, keywords, and experience requirements automatically.

Role Overview

We are looking for a motivated and enthusiastic AI Engineer (Entry-Level) to join our team. As a fresher, you will collaborate with senior engineers and data scientists to design, develop, and deploy AI-driven solutions. This role is ideal for candidates with strong programming skills, a solid understanding of machine learning concepts, and a keen interest in artificial intelligence applications.

Key Responsibilities

Assist in building and training machine learning models for real-world applications.

Support data preprocessing, cleaning, and feature engineering tasks.

Collaborate with cross-functional teams to integrate AI models into production systems.

Conduct research on emerging AI technologies and frameworks.

Recommendations

Add missing technical skills

HIGH

Consider adding these skills if you have experience with them: data science, machine learning, numpy, pandas, scikit-learn.

Why: These skills appear in the job description but were not found in your resume, which lowers your keyword match score.

Add clearly labeled section headers

HIGH

Add standard section headers for: experience.

Why: ATS parsers rely on clearly labeled section headers to correctly categorize content.

Add a GitHub profile link

MEDIUM

Include a link to your GitHub profile near your contact details.

Why: Recruiters and ATS systems use GitHub links to verify hands-on coding experience.

Add a LinkedIn profile link

MEDIUM

Include your LinkedIn profile URL in the header of your resume.

Why: A LinkedIn link increases recruiter trust and is commonly expected on professional resumes.

Quantify your project impact

MEDIUM

Add measurable outcomes to your projects, e.g. "reduced load time by 40%" or "served 1,000+ daily users"
